Parcel Fabric Services
Save time and money by working with parcel data in the fabric

Eliminate manual tasks from the parcel data update process, maximize return on investment, and complete assessments faster with Esri's Parcel Fabric.

Pro-West is a go-to Esri partner for parcel fabric expertise, and its clients benefit from our continuous engagement with Esri's parcel fabric technical team, as well as experience gained from completing over 60 parcel fabric implementations for local governments.

Experience the transformation made possible by automating processes, reducing incoming queries, and dramatically increased productivity.

DATA THAT WORKS
Creating data that is accurate, centralized, easily accessible, meaningful, and shareable.

INNOVATION
Benefit from mobile-first apps designed by Pro-West specifically for parcel fabric users, autuomatically updated with accurate data, and used by the public or internal departments. A Pro-West-developed publishing script enables automatic updates from the fabric to other applications.

EFFICIENCY
Migrating to, or developing parcels in the parcel fabric provides dramatic improvement in parcel maintenance time. Editing is more efficient, with the all-encompassing concept of a parcel in the fabric, and a dedicated Parcel Fabric Editing toolbar, elimination of redrawing entire parcels, and automatic updates also provide efficiency increases. Experience the cascading effect of this efficiency for your depatrment and organization.

HISTORY PRESERVATION
Existing parcels are automatically moved to "History" when their shape is modified; historic information can be viewed in a separate layer, and editing information is automatically tracked.

EDIT-ONLY ENVIRONMENT
The parcel fabric is a place strictly for editors in which editing tools and tasks have been optimized for efficiency. It cannot be consumed by map services or applications, eliminating the possibility of seeing "in progress" work.

STANDARDIZED PLATFORM SOLUTION
A standardized, out-of-the-box solution allows users to take full advantage of software license fees already invested, puts your organization on a par with neighoring local governments, and avoids the complications that can arise from having multiple solutions supplied by multiple vendors.

WHY PRO-WEST?

- Experience of managing unique parcel data situations

- Standardized migration workflow with built-in quality control

- Direct collaboration with Esri parcel fabric technical team

- 30 years of parcel data development for local government

- Continuous innovation to support parcel fabric clients

"Many users report a **50% increase** in parcel throughput using the fabric."

- Esri
