# What is the Parcel Fabric in ArcGIS Pro?

The Parcel Fabric in ArcGIS Pro empowers organizations with a complete land records management solution based on modern, industry-standard technology. Parcel Fabric in ArcGIS Pro replaces the previous ArcMap Parcel Fabric environment, offering many advantages for organizations looking to improve data accuracy and operational efficiency:

- ✔ Up-to-date technology. Stay ahead of ArcMap's 2026 deprecation.
- ✔ Automation. Manage, update, track, archive and serve data with automated processes. Create your own automated processes for specific workflows.
- ✔ Improved feature service editing. Multi-user and remote capabilities, plus versioned editing so data cannot be viewed until deemed ready.
- ✔ Flexible tools. All data (whether in the Parcel Fabric or not) can be edited with any tool – no need to sketch first.
- ✔ Improved data accuracy. Highly intuitive clean-up tools help find flaws and ensure new data meets quality standards.
- ✔ Improved historical data tracking. Historical data is stored in a way that is more organized and easier to find.
- ✔ Fewer features to maintain. Labels are used instead of annotation to bring further efficiency.
- ✔ Flexible schema. Add schema items to the geodatabase at any time, or maintain temporary features.

## Services Available from Pro-West

### MIGRATION TO PARCEL FABRIC IN ARCGIS PRO

Whatever platform you are currently using to manage your parcel data – whether ArcMap Parcel Fabric or a non-Parcel Fabric technology (for example, CAD or shapefiles) – Pro-West offers full-service packages to migrate your data to the Parcel Fabric in ArcGIS Pro.

Included in all packages are custom training and technical support to ensure your in-house team is equipped to edit parcel data in ArcGIS Pro.

## PARCEL REMAPPING

For Counties with significant, ongoing challenges with their parcel data, the most efficient option to improve the land records management process may be redrawing parcels from scratch. This is a large-scale project that many organizations are unable to support with current staffing levels or skill sets and the services of a partner with specialized expertise are required to complete the project to a high standard within the desired timeframe.

Included in all packages are custom training and technical support to ensure your in-house team is equipped to edit parcel data in ArcGIS Pro.

## PARCEL MAINTENANCE

Does your County need assistance with keeping your parcels up-to-date? Do you have an influx of parcel updates that you struggle to keep up with, or did a change in personnel cause a backlog of updates that is waiting to be completed? Or, are you simply looking for assurance that updates will be performed consistently within a specified timeframe, without the worry of accommodating in-house workloads?

Pro-West has a range of parcel maintenance plans to meet your needs, whether filling a temporary resource gap or providing ongoing peace of mind. The table below provides more information to help determine the right plan for you.

<i>What plans are available for parcel maintenance?</i>	Pro-West offers <b>daily, weekly, monthly, or quarterly</b> parcel maintenance plans.
<i>What types of parcel updates are covered?</i>	Splits, merges, new subdivisions, lot line adjustments, right of way.
<i>What does the County need to provide?</i>	<ol style="list-style-type: none"><li>1. Access to land records data.<ol style="list-style-type: none"><li>A. Shared editable service.</li></ol></li><li><b>OR</b></li><li>B. Remote connection and GIS license capability to allow for updates.</li></ol> <ol style="list-style-type: none"><li>2. Recorded document that defines the required update, e.g. plat, deed, lot adjustment, etc.</li></ol>
<i>What frequency can these services be provided?</i>	Daily, weekly, monthly, or quarterly, depending on the chosen plan. Pro-West will work with you to determine the most appropriate plan for your organization's needs.
<i>What additional services can be provided?</i>	Populating additional attributes in ancillary feature classes for solution needs. Assessor map updates.
